## Intro-to- Particle Physics **LifeLab Foundation QuarkNet India**

Cristina Mantilla Suarez w. slides from A. Hall

#### **Jan 14th 2020**

## A little about me

- Born in Ecuador (also undergrad there)
- PhD @ Johns Hopkins, 2020, now Fermilab postdoc

• I like Higgs boson physics, particle jet physics and particle dark matter in accelerators

### The "visible" universe Our current understanding

Protons/ neutrons

Gravitational force

## The "visible" universe Our current understanding

Particles of matter

Gravitational force

# How did we get here?

![](_page_4_Figure_1.jpeg)

![](_page_4_Picture_2.jpeg)

![](_page_4_Figure_3.jpeg)

Water Air

mercury

• • •

![](_page_4_Picture_7.jpeg)

![](_page_4_Figure_8.jpeg)

## How did we get here? **Our concept of "elementary" particles**

- **Foundational**: everything is made out of this
- **Impenetrable**: cannot be broken apart
- **Indistinguishable**: every electron identical to every other electron  $\bullet$

By 1930s: protons, neutrons, electrons: life is good

![](_page_5_Picture_6.jpeg)

![](_page_5_Picture_7.jpeg)

![](_page_5_Picture_9.jpeg)

![](_page_5_Picture_10.jpeg)

![](_page_5_Picture_11.jpeg)

## Earth's building blocks

All ordinary matter in our universe is made of:

![](_page_6_Picture_2.jpeg)

![](_page_6_Picture_4.jpeg)

![](_page_6_Picture_5.jpeg)

#### Protons and neutrons are not elementary... but up and down quarks are:

![](_page_6_Picture_8.jpeg)

![](_page_7_Figure_0.jpeg)

There are 3 generations: same properties only heavier

heavier

iahter

Тор

~4.18 GeV/c<sup>2</sup>

Bottom

![](_page_7_Picture_8.jpeg)

## Leptons

## The most known ones are the electron and the muon. We often say that the muon is a cousin of the electron but only heavier.

![](_page_8_Picture_2.jpeg)

0.511 MeV/c<sup>2</sup> 105.6 MeV/c<sup>2</sup> 1.77 GeV/c<sup>2</sup>

![](_page_8_Picture_4.jpeg)

We often see muons in cosmic rays (build a cloud chamber!)

vier

1.77 GeV/c<sup>2</sup>

![](_page_8_Picture_8.jpeg)

Tau

![](_page_8_Picture_10.jpeg)

## Neutrinos

Neutrinos are a type of leptons. They also come in three types - one for each generation. Neutrinos have very little mass and interact only via the weak force

Leptons

![](_page_9_Picture_3.jpeg)

This means that you would need a light year of lead nuclei to have a 50% of interacting

Tau neutrino

![](_page_9_Picture_8.jpeg)

![](_page_9_Picture_9.jpeg)

![](_page_9_Figure_10.jpeg)

## Antimatter

Antimatter is exactly the same as matter except: the charge is flipped Neutral particles (zero charge) are their only antiparticle.

![](_page_10_Figure_2.jpeg)

Matter and anti-matter particles always come in pairs They annihilate each other if they are in contact

![](_page_10_Picture_6.jpeg)

Positron

![](_page_10_Picture_9.jpeg)

![](_page_10_Picture_10.jpeg)

## **Antimatter** How do we produce it?

#### Some antimatter is easier to produce than others...

Potassium-40 can produce positrons when it decays

![](_page_11_Picture_3.jpeg)

A banana (lots of potassium) produces a positron (e+) ~ every 75 min

![](_page_11_Picture_5.jpeg)

## Colliding protons on a fixed target of metal

![](_page_11_Picture_7.jpeg)

 $p + p \rightarrow \bar{p} + p + p + p$ 

![](_page_11_Picture_9.jpeg)

## Force carriers

**Force carriers**: particles that give rise to interactions between particles

**Forces:** the effects of the force carrier particles on matter particles

![](_page_12_Figure_3.jpeg)

Force carriers

![](_page_12_Picture_5.jpeg)

## The unseen effect

### Two people exchanging a basketball ~ two particles exchanging a force carrier

![](_page_13_Picture_2.jpeg)

force carrier particles

#### All the interactions that affect matter particles are due to the exchange of

![](_page_13_Picture_5.jpeg)

![](_page_13_Picture_6.jpeg)

## The Higgs boson **Our last piece**

![](_page_14_Picture_2.jpeg)

#### The Higgs mechanism explains how elementary particles get their mass

#### 1. Higgs field permeates the universe

Massive particles interact a lot with this field

## 2. New particle predicted: the Higgs boson

Discovered at Large Hadron Collider @ 2012

![](_page_14_Picture_8.jpeg)

## The Standard Model of Particle Physics

![](_page_15_Figure_1.jpeg)

![](_page_15_Figure_2.jpeg)

![](_page_15_Figure_3.jpeg)

The Higgs boson

Force carriers

![](_page_15_Picture_5.jpeg)

## Some extra miscellaneous info

![](_page_16_Picture_1.jpeg)

## 1. How we draw our particles? **Feynman diagrams**

e.g. electron-positron annihilation

**Allowed vertex:** 

![](_page_17_Figure_3.jpeg)

Vertices can be combined to produce allowed interactions

#### A nice way to explain particle interactions (also essential in Quantum Field Theory)

![](_page_17_Figure_6.jpeg)

Antimatter is shown with arrows backwards in time

![](_page_17_Picture_8.jpeg)

![](_page_17_Picture_9.jpeg)

## A weird property of the strong force

The dynamics of quarks and gluons is governed by the strong force. Quarks and gluons cannot be found individually in nature They are confined to groups of particles called: hadrons

![](_page_18_Figure_2.jpeg)

Baryons

![](_page_18_Picture_7.jpeg)

Mesons

![](_page_18_Picture_9.jpeg)

# **Particle Jets**

![](_page_19_Picture_1.jpeg)

![](_page_19_Picture_3.jpeg)

## Summary of what we have learned

- The **Standard Model** is the most complete explanation of fundamental particles and their interactions
- Quarks and leptons are **matter particles**
- Each force has force carrier particles associated with it
- The Higgs mechanism is responsible for the masses of elementary particles

![](_page_22_Picture_5.jpeg)

![](_page_22_Picture_6.jpeg)

## Some questions for the future

- Why is there more matter than antimatter?
- What is dark matter? Is it a particle?
- Is there any evidence for other particles? e.g. supersymmetry?
- Why do the three generations have different masses?
- Where does gravity fall in?

![](_page_23_Picture_7.jpeg)

## **Questions?**

![](_page_24_Picture_2.jpeg)

### **Jets in our detector** Jets of the Standard Model

![](_page_25_Figure_1.jpeg)

#### From J. Thaler

![](_page_25_Figure_3.jpeg)

100 MeV + gluon radiation

4.2 GeV + gluon radiation

1.3 GeV + gluon radiation

O GeV + gluon radiation

1GeV

![](_page_25_Figure_10.jpeg)

![](_page_25_Figure_11.jpeg)

![](_page_25_Picture_12.jpeg)

### Jets in our detector **Jets of the Standard Model**

![](_page_26_Figure_1.jpeg)

![](_page_26_Figure_2.jpeg)

![](_page_26_Picture_3.jpeg)

![](_page_26_Picture_4.jpeg)

### **Looking for a resonance** At the LHC

![](_page_27_Figure_1.jpeg)

![](_page_27_Figure_2.jpeg)

p<sub>T</sub> < 200 GeV m<sub>W</sub> ~ 80 GeV

![](_page_27_Picture_4.jpeg)

### **LHC results** Looking for a resonance

![](_page_28_Figure_1.jpeg)

![](_page_28_Figure_2.jpeg)

![](_page_28_Picture_3.jpeg)
