

Recoiling protons

TOTEM proton-scattering events for
student analysis

Angular Topology

$$\theta_x = 209 \mu\text{rad} \quad \theta_x = -208 \mu\text{rad}$$

$$\theta_y = 99 \mu\text{rad} \quad \theta_y = -92 \mu\text{rad}$$

- Find the **red star (*)** and the **green X**. Each represents a proton strike on the detector, albeit from different sides of TOTEM.
- Drop a vertical line to read the value of θ_x for both the **red star (*)** and the **green X**.
- Drop a vertical line to read the value of θ_y for both the **red star (*)** and the **green X**.
- Record *all four values* in your tally sheet.
